Sprint 3 Burndown Chart Review

Overview

During Sprint 3, our team made significant progress in accomplishing our set tasks. We've focused on enhancing user experience, introducing new features, and improving backend support. Here's a brief review of our progress.

Completed Tasks

1. **User Follower and Following Backend Support**: We've successfully implemented backend support for user follower and following features. This now enables users to follow other users and view their followers.
2. **Logging Workouts**: Users now have the capability to log their workouts. This feature allows users to track their progress.

3. **Routines**: The introduction of routines in Sprint 3 is pretty big. Users can now create, follow, and share routines. This makes it easier for users to plan their workouts.

4. **Fitbook Profile**: We have also completed the Fitbook Profile. Users can now view and edit their profile.

Burndown Chart Analysis

The burndown chart for Sprint 3 shows that our team was able to maintain a consistent pace, steadily completing tasks throughout the sprint. This trend indicates effective task management, adequate resources, and efficient problem-solving when encountering issues.

Our sprint began with a high number of story points, which consistently decreased as we progressed through the two-week period. We completed the sprint with tasks marked as done, which is a great achievement.

The trend line on the burndown chart aligns closely with the ideal trend line, indicating that our team was able to effectively manage the workload and complete tasks within the projected time frame.
